## Lab LinkedList

## **Data Structures CSCI 2320**

# **Lab Objective**

Learn how to implement and use a LinkedList ADT in C++.

### **Lab Overview**

You will receive a partial implementation of a LinkedList in C++. Your mission is to implement some of the methods for the class as well as understand all the other methods.

### **Lab Tasks**

#### Task 1

Implement the following methods for the LinkedList class in LinkedList.h:

- **void insert(int index, const T& value)** This method inserts an item in the list at the specified index, which starts at zero. This method should throw an **out\_of\_range** exception.
- void push\_back(const T& value) This method places an item at the back of the list.
- void push\_front(const T& value) This method places an item at the front of the list.
- void pop\_back() This method removes the last item in the list. This method should throw an out\_of\_range exception.
- **void pop\_front()** This method removes the first item in the list. This method should throw an **out\_of\_range** exception.

#### Task 2

Implement the following in your main driver main.cpp.

- Print this exact message at the beginning of your main before any output.

  Welcome to the LinkedList test program.
- Print this exact message at the end of your main after all other output.
   Goodbye!

# **Final output**

Your output must be *exactly* the following to receive the points allocated for output.

Welcome to the LinkedList test program.

```
Test some integer lists...
Integer list 1: 5 10 20 30
Front element: 5
Back element: 30
Pop front: 5
Integer list 1: 10 20 30
Pop front: 10
Integer list 1: 20 30
Length of list 1 is 2
List 1 is not empty
Pop back: 30
Pop back: 20
Integer list 1::
List 1 is empty
Integer list 1: 10 20 30
Copy integer list 1 to integer list 2.
Integer list 2: 10 20 30
Pop 2 elements of the front of integer list 2.
Integer list 1:30:
Integer list 2:10 20 30:
Integer list 2 via std cout: 10 20 30:
Test some exceptions...
List 1 is empty
Front element: Exception: LinkedList is empty
Back element: Exception: LinkedList is empty
Test some string lists...
String list 1: Please, may I have some spam?
Try inserting an element at position 3
String list 1 has length 4
String list 1: Please, may I have some more spam?
Try inserting an element at the beginning
String list 1: Sir! Sir! Please, may I have some more spam?
Try inserting an element at the end
String list 1: Sir! Sir! Please, may I have some more spam? I love spam!
Try inserting an element out of range
String list 1 has length 7
Exception: Index out of range
Expected failure trying to insert out of range
Remove the first and last element and print result
```

String list 1: Please, may I have some more spam?

Goodbye!

### **Rubric**

Name	Description	Points
Main Output	Run the student main and compare output required output	5
Coding Style	Run cpplint on student code to check coding style	5
Empty	Test Method	1
Size	Test Method	1
PushBackAndBack	Test Method	15
PopBack	Test Method	10
PopFront	Test Method	10
PushFrontAndFront	Test Method	15
Insert	Test Method	20
Erase	Test Method	1
FrontException	Test Method	1
BackException	Test Method	1
PopBackException	Test Method	5
PopFrontException	Test Method	5
InsertException	Test Method	5
Print	Test Method	0
Total Points		100

## **Due Dates and Honor**

The due date is specified on Blackboard.

This is an *independent* programming project, and it is very important that you understand and abide by the *academic integrity policy* concerning programming projects. Remember, your personal honor and integrity is far more important than your grade on the project.

## **Grading**

This lab is available in GitHub Classroom. Accept the URL on Blackboard and then clone your repository to your machine for development. Your lab will be graded automatically via GitHub. Please check the grading results each time you check in your code. Your final grade will be based upon your last sync to GitHub before the deadline.

# **Project Artifacts**

The following should be completed by the due date/time specified on Blackboard.

- Check in all source code changes to your GitHub repository. Please check your URL using a web browser to verify that your changes have been synced.
- Submit the URL for your repository to Blackboard.
